

Accelerating AI Innovation Within Your Enterprise

Enhancing development and delivery with GitHub Copilot

Drive AI adoption, deliver innovation, improve code quality, and solve a critical business need with a custom functioning prototype built by Microsoft technical experts and GitHub Copilot at no cost.

Our Innovation Factory is a 10-day development engagement where we:

- 1 Identify an Opportunity** (1 Day)
 You engage in a strategy briefing with Microsoft's experts, and together, we identify an opportunity for innovation and craft a solution.
- 2 Build a Prototype** (2-4 Days)
 Microsoft technical experts build a functional prototype based on the opportunity we identified and agreed upon in the briefing.
- 3 Validate the Solution** (1-2 Days)
 Our experts provide the solution in a sandboxed environment for you to test and provide feedback helping us gain further clarity.
- 4 Implement Improvements** (1-2 Days)
 Based on your initial feedback, our experts implement any critical changes to the prototype prior to final delivery.
- 5 Evaluate Outcomes** (1 Day)
 We conduct a post-mortem with you and the account team, providing documentation of what has been completed and identifying next steps.
- 6 Hand Off Deliverables**
 We hand off the deliverables to your internal team, your customer success team at Microsoft, and your preferred partner for additional development.

Let's Get Started!
 Contact your Microsoft account team for more information.

Developer Satisfaction		Code Quality		Business Impact	
87%	73%	84%	53%	55%	25%
Developers who reportedly expend less mental energy on repetitive tasks.	Developers who say Copilot helps them "stay in the flow" and be more productive.	Average increase in successful builds upon introducing Copilot.	Greater likelihood of passing all unit tests when using Copilot.	Tasks completion rate when developers used GitHub Copilot.	Average increase in overall developer velocity when using Copilot.
